

# GROUP 5 COMBINED OPERATION

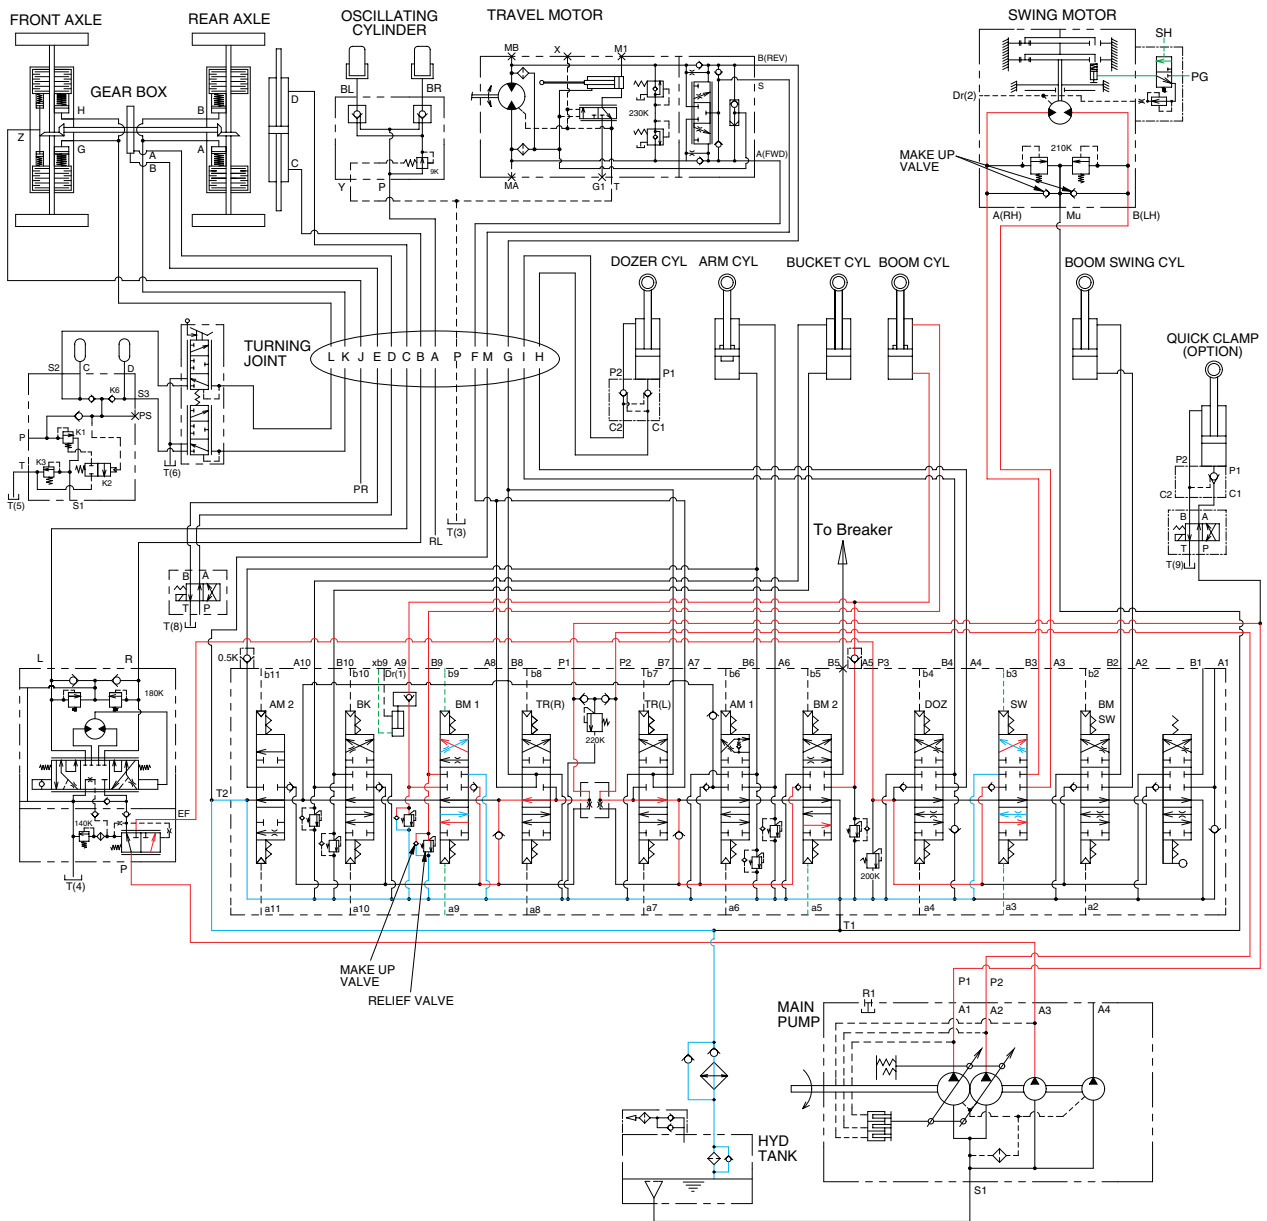

## 1. OUTLINE

55W7HC21

The oil from the P1, P2, P3 pump flows through the neutral oil passage, bypass oil passage and confluence oil passage in the main control valve. Then the oil goes to each actuator and operates them. Check valves and orifices are located on these oil passage in the main control valve. These control the oil from the main pumps so as to correspond to the operation of each actuator and smooth the combined operation.

## 2. COMBINED SWING AND BOOM OPERATION

55W7HC22

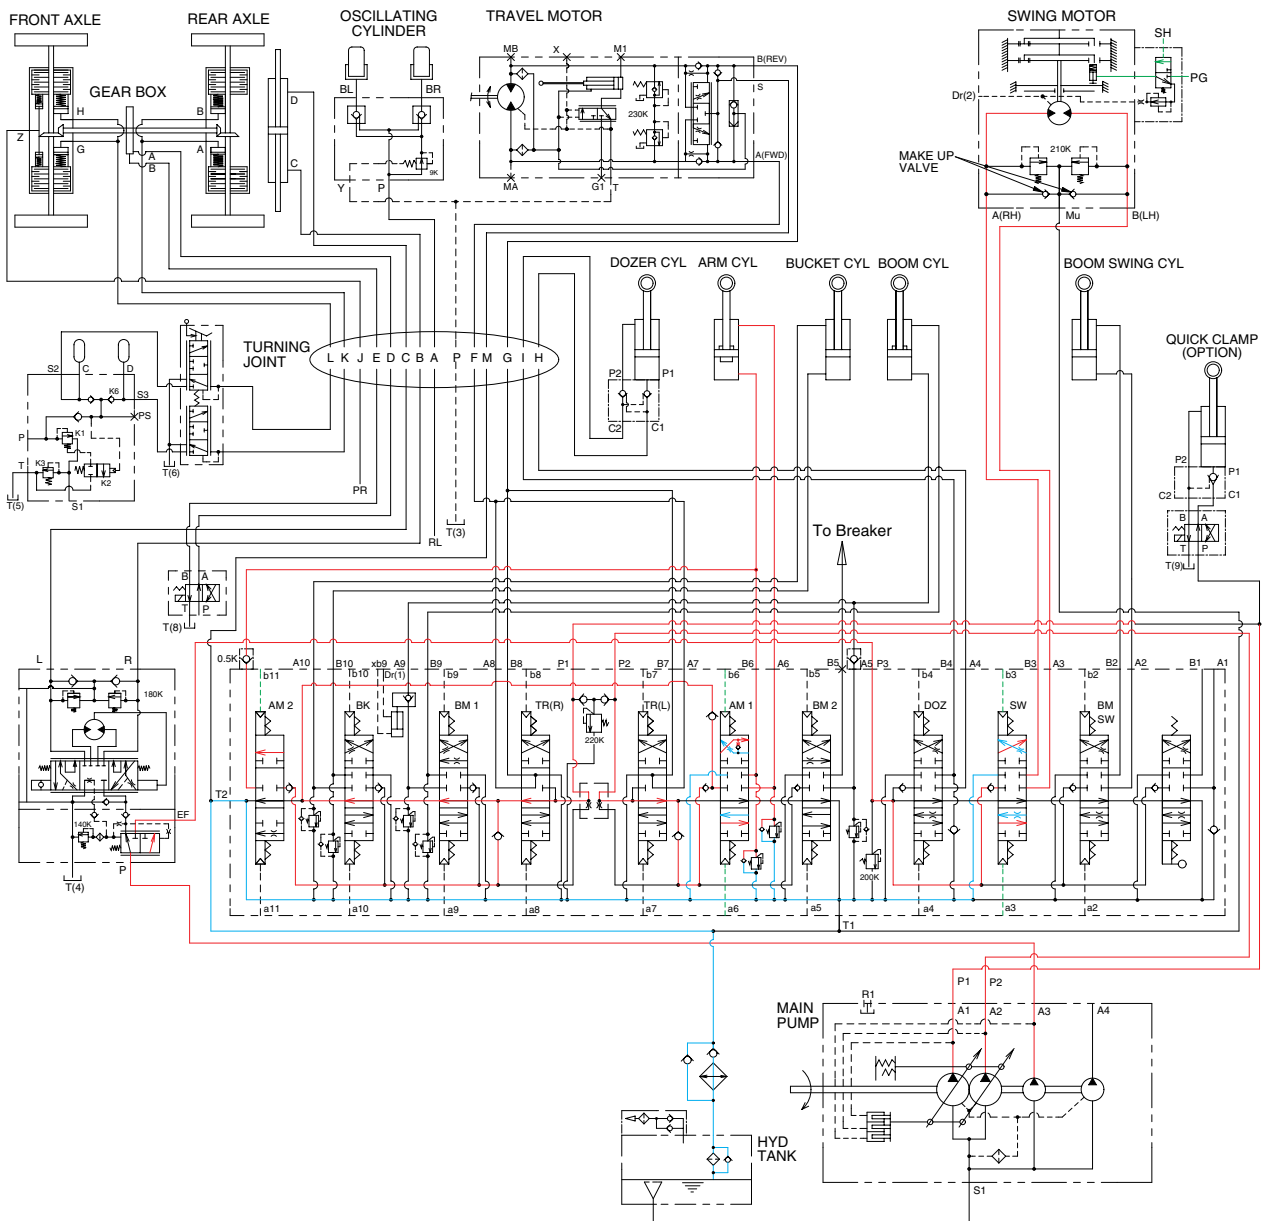

When the swing and boom functions are operated, simultaneously the swing spool and boom spools in the main control valve are moved to the functional position by the pilot oil pressure from the remote control valve.

The oil from the P1 and P2 pump flows into the boom cylinder through boom 1 and boom 2 spool.

The oil from the P3 pump flows into the swing motor through the swing spool.

The superstructure swings and the boom is operated.

### 3. COMBINED SWING AND ARM OPERATION

55W7HC23

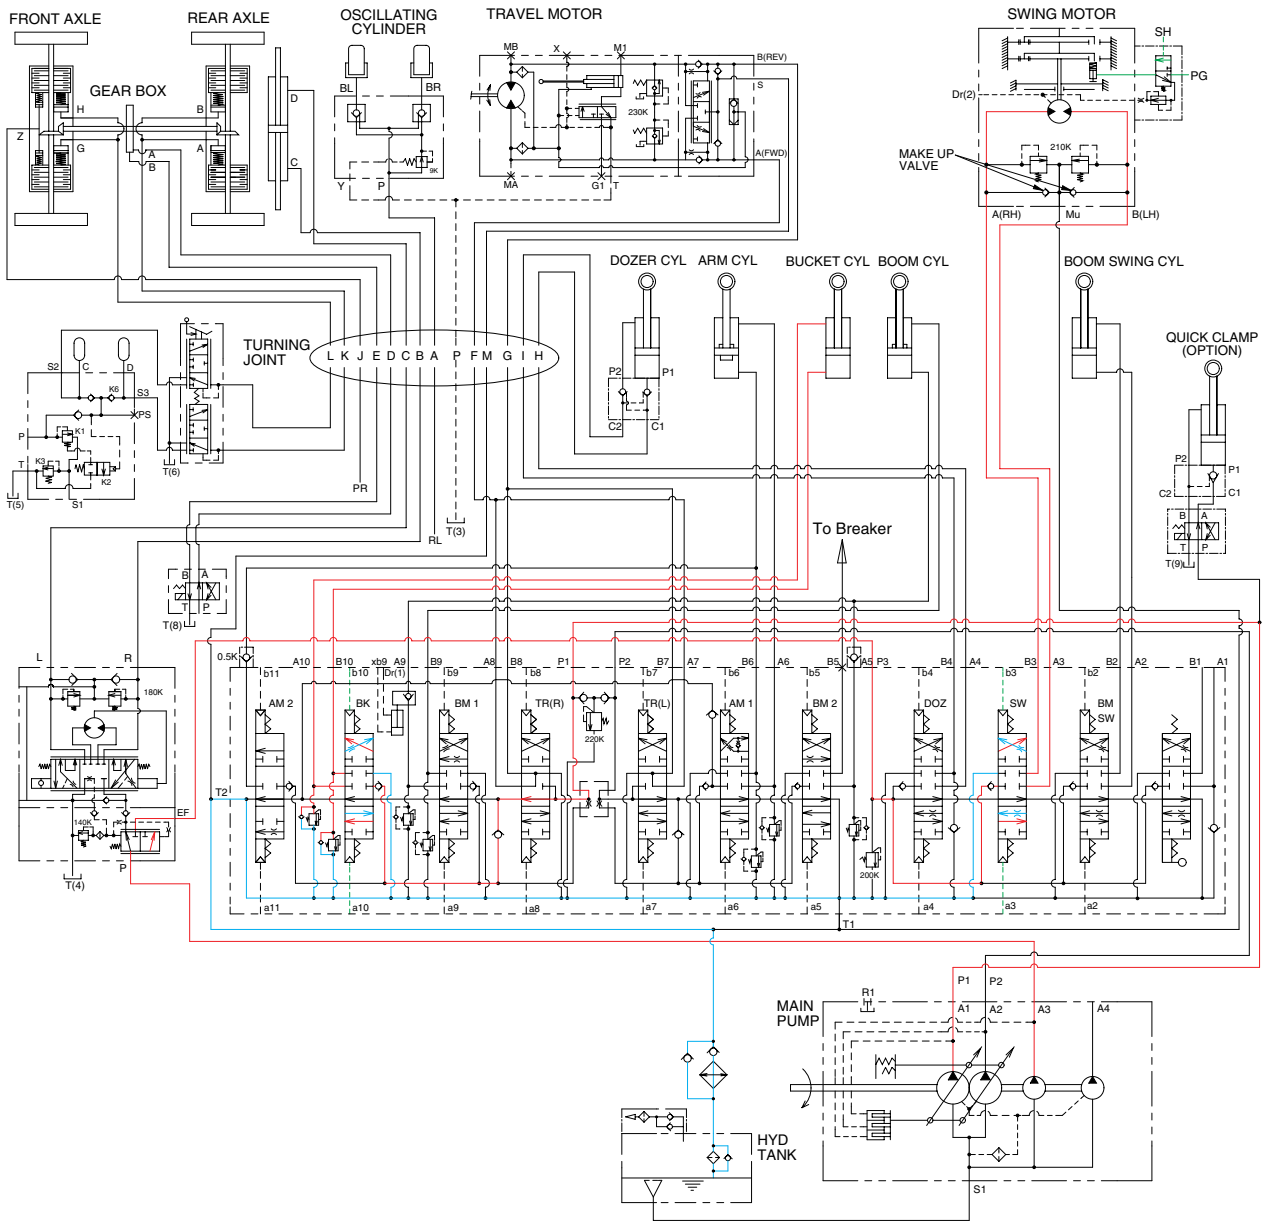

When the swing and arm functions are operated, simultaneously the swing spool and arm spools in the main control valve are moved to the functional position by the pilot oil pressure from the remote control valve.

The oil from the P3 pump flows into the swing motor through swing spool.

The oil from the P1 and P2 pump flows into the arm cylinder through the arm 1 and arm 2 spool.

The superstructure swings and the arm is operated.

## 4. COMBINED SWING AND BUCKET OPERATION

55W7HC24

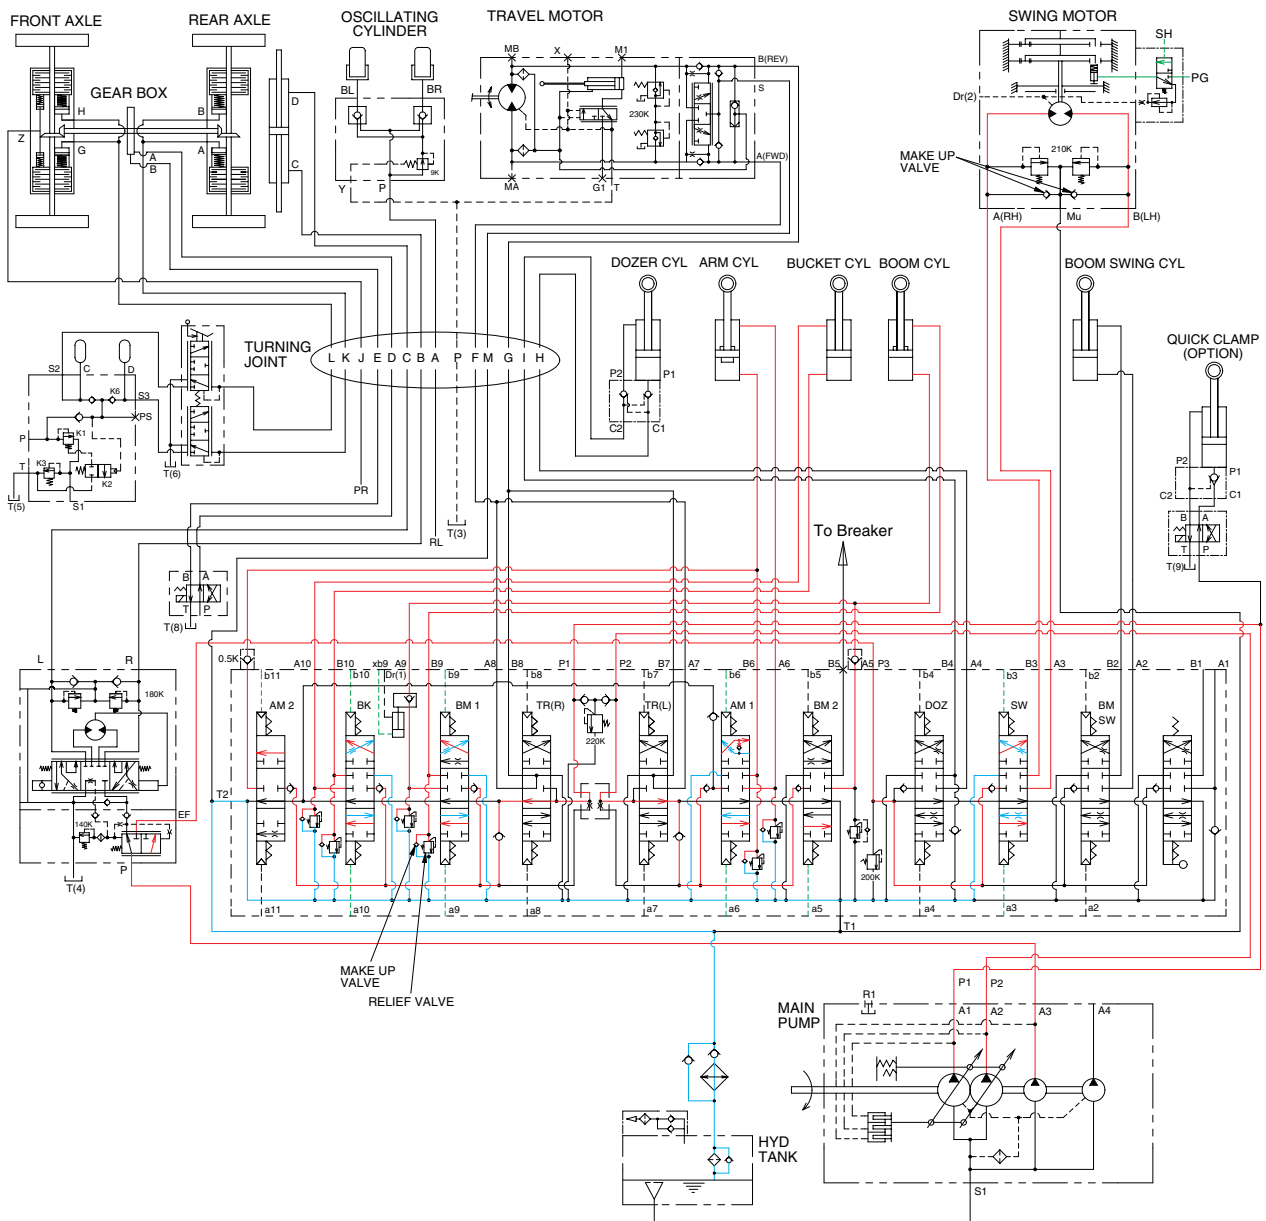

When the swing and bucket functions are operated, simultaneously the swing spool and bucket spool in the main control valve are moved to the functional position by the pilot oil pressure from the remote control valve.

The oil from the P3 pump flows into the swing motor through the swing spool.

The oil from the P1 pump flows into the bucket cylinder through the bucket spool.

The superstructure swings and the bucket is operated.

## 5. COMBINED SWING, BOOM, ARM AND BUCKET OPERATION

55W7HC25

When the swing, boom, arm and bucket functions are operated, simultaneously each spool in the main control valve is moved to the functional position by the pilot oil pressure from the remote control valve.

The oil from the P1 pump flows into the boom cylinder, arm cylinder and bucket cylinder through boom 1 spool, arm 2 spool, bucket spool.

The oil from the P2 pump flows into the boom cylinder and arm cylinder through the boom 2 spool and arm 1 spool.

The oil from the P3 pump flows into the swing motor through the swing spool.

The superstructure swings and the boom, arm and bucket are operated.
